MISTRAL

LOGO GUIDELINES

2026

Establishing clearspace ensures that there’s a minimum amount of empty space around the logo. In the example depicted over here, we use the height of the symbol as a unit to mark off the clearspace of the primary lockup, but that can also be applied to the symbol or the wordmark used in isolation.

Establishing a minimum size ensures that the impact & legibility of the logo isn't compromised.

For our primary lockup, 100 px is the recommended minimum width. For our symbol used in isolation, we can go a tad smaller, to 20 px width.

1 2

Our sunset gradient has been carefully crafted to deliver strong color contrast across both light and dark backgrounds, ensuring vibrancy without compromising accessibility. It is the default expression of our symbol and should be used whenever possible, consistently and confidently, as a primary marker of our brand.

3 4

On colored or complex backgrounds, such as photography or layered graphics, the logo should shift to a monochrome execution, rendered entirely in black or white depending on contrast needs.

The wordmark remains intentionally restrained: it should never appear in color, defaulting to black, or white when accessibility requires.

4

The color rules for our icon follow the same principles as those for the wordmark.

❌ DON'T

❌ DON'T

❌ DON'T

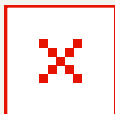

❌ DON'T

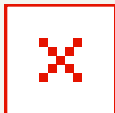

Do not use the gradient version on colored or photo backgrounds.

Do not place the logo on low-contrast backgrounds where legibility is compromised.

Do not use recreated, modified, or unofficial versions of the logo.

Do not recolor or use the wordmark in colors other than Black (#151524) or White.

Do not skew, rotate, or distort the logo in any way.

Don't add effects (i.e: Drop shadow).
